

Hi! This is the Trustpool team!

We spent several days creating and testing new stratum servers for clients from Russia to improve connection stability, reduce the number of redirects and avoid hashrate drops. The tests were successful.

IMPORTANT:

- If you are doing fine, don't change anything.
- If the hash rate drops and there are more redirects, follow the instructions below.

You need to copy and paste the new stratum servers in place of the old ones. They are all here:

BTC

stratum+tcp://btc.trustpool.cc:3333
stratum+tcp://btc.trustpool.cc:443
stratum+tcp://btc.trustpool.cc:25

LTC

stratum+tcp://ltc.trustpool.cc:3333
stratum+tcp://ltc.trustpool.cc:443
stratum+tcp://ltc.trustpool.cc:25

BCH

stratum+tcp://bch.trustpool.cc:3333
stratum+tcp://bch.trustpool.cc:443
stratum+tcp://bch.trustpool.cc:25

DASH

stratum+tcp://dash.trustpool.cc:3004
stratum+tcp://dash.trustpool.cc:304

KAS

stratum+tcp://kas.trustpool.cc:3015
stratum+tcp://kas.trustpool.cc:315

If you don't know how to switch to the new stratum servers, write to our admins. They will help:

@Sevenzerg
@benVLADden
@ALEX_industries
@Aleksey_trustpool
@Kirill_trustpool

ONE MORE TIME — THIS IS IMPORTANT. IF THE OLD STRATUMS ARE WORKING, LEAVE EVERYTHING AS IT IS. IF THE STRATUMS DON'T WORK, CHANGE TO THE NEW ONES IN THIS DOCUMENT.

Thank you. Your Trustpool ❤️
